DETAILED ACTION

1. Claims 1-11 are presented for examination.
2. It is noted that although the present application does contain line numbers in specification and claims, the line numbers in the claims do not correspond to the preferred format. The preferred format is to number each line of every claim, with each claim beginning with line 1. For ease of reference by both the Examiner and Applicant all future correspondence should include the recommended line numbering.
3. Applicant is required to update the status (pending, allowed, etc.) of all parent priority applications in the first line of the specification. The status of all citations of US filed applications in the specification should also be updated where appropriate.
4. The use of the trademark IBM SurfAid, Alexa among others have been noted in this application (pg 3). It should be capitalized wherever it appears and be accompanied by the generic terminology. Appropriate correction is required to the entire specification/drawings.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371 (c) of this title before the invention thereof by the applicant for patent.

6. Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Ross, Jr. et al. (hereinafter Ross), US 6,629,135.

Art Unit: 2154

7. As per claim 1, Ross teaches a method for combined browsing and searching in a collection of connected content portions comprising:

determining at least one user keyword (Col. 15, lines 1-30);

determining at least one relevant document path of connected content portions (Col. 15, lines 1-30);

determining an information scent value associated with the relevant document path (Col. 15, lines 1-35);

synthesizing a display attribute based on the determined information scent and the at least one user keyword (Col. 14, lines 20-35; Col. 15, lines 1-30).

8. As per claim 7, Ross teaches

a controller circuit (Col. 2, lines 50-63);

a content determining circuit (abstract);

a topology determining circuit (Col. 5, lines 1-10);

an input/output circuit for entering at least one user keyword (Col. 2, lines 20-45);

a relevant document path determining circuit that determines at least relevant document path of connected content portions based on at least one user keyword (Col. 15, lines 15-35);

the remaining sections of claim 7 is rejected for the same reasons as rejection to corresponding sections in claim 1 above.

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2154

10. Claims 2-6 and 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ross, Jr. et al. (hereinafter Ross), US 6,629,135, in view of Schuetze et al. (hereinafter Schuetze), US 2003/0074368.

11. As per claim 2, Ross does not explicitly teach the method of claim 1, wherein the determined information scent value is determined by an information scent document vector.

12. Schuetze teaches the above sections in the sample section of [0076].

13. It would have been obvious to one of ordinary skill in this art at the time of invention was made to combine the teaching of Ross and Schuetze because they both dealing search engines. Furthermore, the teaching of Schuetze to allow determined information scent value is determined by an information scent document vector. would improve the efficiency for Ross's system by defining a quantitative similarity metric between documents using a vector approach.

14. As per claim 3, Ross teaches the method of claim 2, wherein determining content information is based on weighted word frequency of each content portion (Col. 24, lines 7-15; Col. 15, lines 1-35).

15. As per claim 4, Ross teaches the method of claim 2, wherein each content portion in the relevant document path is weighted based on content portion position in the relevant document path (Col. 15, lines 1-55).

16. As per claim 5, Ross teaches the method of claim 2, wherein the synthesized display attribute relates to the connection or links among content portions (Col. 14, lines 20-35; Col. 15, lines 1-30).

17. As per claim 6, claim 6 is rejected for the same reasons as rejection to claim 5 above.

Art Unit: 2154

18. As per claims 8-11, claims 8-11 are rejected for the same reasons as rejection to claims 2-5 above respectively.

Conclusion

19. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents and publications are cited to further show the state of the art with respect to "SYSTEMS AND METHODS FOR COMBINED BROING AND SEARCHING IN A DOCUMENT COLLECTION BASED ON INFORMATION SCENT".
